	<i>Vitis</i>	Grapevine	Yes			

\*Plant species with minimal or no soil (such as air plants) have minimal or no mycorrhizal relationships.

This list is a living document that is constantly updated as new trials are conducted and scientific journal articles are published identifying new plant mycorrhizal statuses. Please check our website ([www.mycorrhizae.com](http://www.mycorrhizae.com)) for the latest update. If a family or genus is not included on the list, then an internet search may be helpful. However, if you are performing trials, rest assured that regardless of the mycorrhizal status of a particular plant species, the use of a MycoApply product will not cause harm to your plants. If you wish to confirm colonization of an unlisted plant in your trials, please follow the instructions on the Trial Analysis sheet for root colonization assay submission directions and fee.
