Why are Mycorrhizae Important?

Mycorrhizal fungi are essential to living soils, and allowed plants to colonize the non-aquatic surface of our planet around 460 million years ago. Approximately 95% of all plant species form symbiotic relationships with beneficial mycorrhizal fungi, however, unfortunately many construction zone soils and landscape grounds have depleted mycorrhizal populations. With the MycoApply® products we provide, landscape professionals can re-establish essential microbes and benefit from this age-old symbiotic relationship to get their plantings started right, in living soils which help reduce the need for expensive inputs, increase plant resilience and vigor, and ultimately result in healthier, happier, more sustainable landscapes.

The use of beneficial mycorrhizal fungi provides landscape professionals with a new tool to improve plant health and quality, and experience maximum return on investment.

Benefits for Landscape Professionals

- Multiple mycorrhizal species in MycoApply products provide maximum benefits to landscape plants of all kinds. MycoApply mycorrhizae are suitable for most annuals, perennials, trees, and shrubs.
- MycoApply inoculation results in a significant increase in a plant’s ability to absorb and utilize nutrients and water.
- The MycoApply product line offers multiple application options and formulations to match your application needs and methods.
**MycoApply® Benefits:**

- **Drought Protection**
  Greater root mass allows for increased water absorption and storage during times of excess.

- **Reduced Maintenance**
  Increased water absorption and nutrient utilization reduce the need for fertilizers and irrigation.

- **Transplant Success**
  Mycorrhizae usage increases your installation survivability leading to accelerated rooting and more successful outplanting.

- **Healthy Soil Biology**
  Re-establish the living soils and symbiotic relationships critical for sustainable performance.

- **Better Nutrient Uptake**
  Mycorrhizae not only increase rooting mass and absorptive surface area, but also release powerful enzymes into the soil that dissolve tightly bound soil nutrients for plant utilization.

**MycoApply® Application Options**

- **Drench Application:** MycoApply suspendable powders can be added to water and drenched into the plant or plug's root zone.

- **Soil/Media Incorporation:** All MycoApply products can be mixed with soil or growing media prior to or during planting/transplant. Granular products are well suited for this application method.

- **Others:** Contact our team to discuss the best application method for you. The goal is to create physical contact between the MycoApply active ingredient and the growing or emerging roots.

**Recommended MycoApply® Landscaping Products:**

- **MycoApply® Injector Endo**
  - Concentrated Powder (can pass a #50 screen)
  - 4 species Endomycorrhizal fungi
  - 17,600 Endomycorrhizal Propagules per gram (7,983,219 per lb.)
  - Available in 100 gram Bags (20 gram scoop included)

- **MycoApply® Ultrafine Endo**
  - Suspended Powder (can pass a #50 screen)
  - 4 species Endomycorrhizal fungi
  - 130,000 Endomycorrhizal Propagules per lb. (286.8 per gram)
  - Available in 1 lb. Bags and 20 lb. Bags

- **MycoApply® Ultrafine Endo/Ecto**
  - Suspended Powder (can pass a #50 screen)
  - 4 species Endomycorrhizal fungi
  - 7 species Ectomycorrhizal fungi
  - 130,000 Endo & 110 million Ecto Propagules per lb. (286.8 Endo & 242,509 Ecto per gram)
  - Available in 1 lb. Bags and 20 lb. Bags

- **MycoApply® Soluble MAXX**
  - Suspended Powder (can pass a #50 screen)
  - 9 species Endomycorrhizal fungi
  - 10 species Ectomycorrhizal fungi
  - 92,000 Endo & 1.2 billion Ectomycorrhizal Propagules per lb.*
  - Available in 1 lb. Bags
  - *California formulation may vary - please contact us for more information.

- **MycoApply® Endo**
  - Granular Formulation
  - 4 species Endomycorrhizal fungi
  - 60,000 Endo Propagules per lb. (132.4 per gram)
  - Available in 40 lb. Bags

- **MycoApply® Endo/Ecto**
  - Granular Formulation
  - 4 species Endomycorrhizal fungi
  - 7 species Ectomycorrhizal fungi
  - 60,000 Endo & 110 million Ecto Propagules per lb. (132.4 Endo & 242,509 Ecto per gram)
  - Available in 40 lb. Bags
